

CZY-G

Primary Adhesive Tester

Primary adhesive tester is designed and manufactured according to GB 4852, compatible with ASTM D 3121. It is applicable in tack tests of pressure sensitive adhesive tapes, adhesives and adhesive products.

Principle

The CZY-G tests properties of the adhesives by means of the “rolling ball principle”. When the adhesive and steel ball are brought into contact under low pressure, there will be an immediate bond of measurable strength.

Configuration

Incline panel, ball-placing tool, supporting shelf, adjustable parallel base and steel balls

Standard

JIS Z0237, GB 4852

Technical specifications

- Adjustable angle: 0~60 degrees
- Width of panel: 120 mm
- Test area width: 80 mm
- Standard steel balls: 1/32~1 inch

Physical specifications

Dimension

320 mm x 140 mm x 180 mm (L x B x H)

Net weight

6 kg
